INTRODUCTION

Care of the environment is a matter which concerns us all, whether on a personal, business, national or global level.

Organisations today are under increasing pressure to demonstrate that they do not pursue profit at the expense of the environment.

Organisations in all sectors of industry and public life are experiencing increasing ethical, legal and commercial pressure to manage their

businesses in a demonstrably responsible manner and in compliance with all of the appropriate legislative, regulatory and "other" requirements expected of them in today's society.

Our courses are designed to provide Managers and staff with the knowledge of Environmental legislation, their responsibilities and best practice. The courses also provide an understanding of how to put these "requirements" into practice in the workplace.

Environmental Awareness Courses

CDM - AN INTRODUCTION TO BEST ENVIRONMENTAL PRACTICE : 2 DAYS

AIM

To demonstrate environmental awareness for construction projects at pre and post construction stages and assist in the implementation of environmental best practice on construction projects during the construction phase.

WHO SHOULD ATTEND

This course is a two day course for all those involved in construction work in the planning stage – clients, developers, designers, CDM co-ordinators, principle contractors, contractors, health and safety managers, regulators and local authorities.

Those with project planning responsibilities need to be trained to a level that will enable them to assist at the planning stage of construction projects and in techniques for the implementation of environmental best practice on construction projects.

Ideally delegates should have a basic understanding of CDM 2007 regulations.

COURSE CONTENT

- ▶ Environmental Legislation and the construction industry
- ▶ Regulators and enforcement
- ▶ Environment management systems
- ▶ Project inception
- ▶ Pre construction environmental information
- ▶ Aspect/impact assessment
- ▶ Site waste management plans
- ▶ The project environmental plan
- ▶ Establishing site
- ▶ Enabling works and clean site declaration
- ▶ Best practice on site
- ▶ Emergencies
- ▶ Training and competence
- ▶ Monitoring
- ▶ Post construction

ENVIRONMENTAL AWARENESS FOR CONSTRUCTION SITE MANAGERS & SUPERVISORS : 1 DAY

AIM

To raise environmental awareness of site managers and supervisors who have day to day responsibilities for environmental performance on construction sites.

WHO SHOULD ATTEND

Site managers, supervisors or others involved with the day to day implementation of environmental best practice. Familiarity with construction processes would be an advantage.

COURSE CONTENT

- ▶ Environmental Legislation
- ▶ Regulators and enforcement
- ▶ Environment management systems
- ▶ Establishing site and implementing the environment plan
- ▶ Construction phase operational control
- ▶ Emergency preparedness and response
- ▶ Training awareness and competence
- ▶ Record keeping

ENVIRONMENTAL AWARENESS FOR CONSTRUCTION WORKERS : 1 DAY

AIM

To raise workers awareness and understanding of the environmental challenge facing the construction industry. Delegates need to gain a basic understanding of environmental legislation, grasp the concept of environmental aspects and impacts in relation to construction activities, be able to segregate waste streams and be aware of potential environmental incidents and to assist in responding to emergencies.

WHO SHOULD ATTEND

Workers actively engaged in manual tasks – bricklaying, painting, carpentry, labouring, electrics, plumbing, ground work etc.

COURSE CONTENT

- ▶ Environmental law
- ▶ Those who enforce the law and environmental bad practice
- ▶ Ways in which organisations manage the environment
- ▶ Best practice
- ▶ Emergencies
- ▶ Emergency practical
- ▶ Observation skills
